Re: Docket No. 2005-385- E

Dear Sirs:

Our son in New Jersey has net metering. He has solar cells on his roof and sells his excess electricity back to his service provider.

As President Bush said in his State of the Union speech, we need to address Global Warming. If we have electricity sources such as solar cells and wind, we will slow the production of carbon dioxide and other climate-warming gases. It makes sense to proceed as quickly as possible to establish a policy of net metering in South Carolina.

Because South Carolina will suffer more than most states if the predicted elevation of sea level occurs, we need to act quickly to slow global warming. Net metering will help all of us.

Sincerely,

William R. Hare, Jr.
